

EDUCATION DEVELOPMENT TANZANIA

## NtuNtu Ace Day Care Center

Our vision is to be the recognized safer, fun and friendly child growth and learning space for families primarily women, needing day care services to participate in income earning activities. Our educational programs blending fun and learning are nurtured by talented teams and community of parents and guardians.

Children in the age of 0-5 are natural learners, but in order to fully benefit from this, they need competent caregivers who are able to create supporting and encouraging learning activities. Children in this age learn primarily through joyful activities that strengthen their curiosity and desire to learn.

Ntuntu ACE Day Care Center employs instructed play to nurture children's physical

growth, creativity, imagination, academic and social skills. Ntuntu ACE understands that children love to play, and leverages on instructed play to make children love maths, science, reading, writing, art and music.

We work with small group activities as it is great for building healthy relationship in the classroom. In a mixed ability group children can practice skills as well as teamwork.

We believe that music has a lot of benefits for growing kids and that they much engage with music actively.

Learning an instrument provides kids with an outlet to practice, and as they improve, they will build confidence and boost self esteem.

EDUCATION DEVELOPMENT TANZANIA

**We think it is important that the parents get the opportunity in various activities including playing instruments and others.**

**We believe that one of the best ways for preschoolers to learn and to improve on their languages skills is through nursery rhymes. Both rhyme and rhythm help kids hear the sounds and syllables in words, which helps them learn to read.**

We also believe that play based learning is centered on a child's interest and conservation. When children are allowed to explore various item, colors and shapes common to their home settings, and when teachers play their facilitation role flexible and creative thinking happens.

**We believe that gardening for kids is fun and offers them an opportunity to learn about plant science at an early age. Experiencing mud and getting dirty, enhances kid's sensory skills.**

Children start learning animals names sounds from young age. First , they learn about pets, by imitating how dogs bark and how cats meow, also the sounds of chicken, frogs and cows make. They, as they move forward in their education, they start learning about animals habitats, including what they eat, where they live, and the different types of animals there are.
